## AMENDMENTS TO THE CLAIMS:

The listing of claims will replace all prior versions, and listings, of claims in the application:

## <u>Listing of Claims</u>:

- 1. (original) A child seat which can be fastened to a vehicle seat of a motor vehicle by means of a three-point seat belt, the three-point seat belt being equipped with a tightening device, with a belt system for securing a child sitting on the child seat, characterized in that the three-point seat belt (14) is coupled to the belt system of the child seat (1).
- 2. (original) The child seat as claimed in claim 1, characterized in that a tightening of the three-point seat belt (14) activates a coupling element which is connected to the belt system of the child seat and causes a tightening of the belt system of the child seat (1).
- 3. (original) The child seat as claimed in claim 2, characterized in that the coupling element is a belt strap (12), the first free end of which is connected to the three-point seat belt (14) and the second free end of which is connected to the belt system of the child seat (1).
- 4. (currently amended) The child seat as claimed in one of elaims 1 to 3 claim 1, characterized in that the three-point seat belt (14) is guided about an upper and a lower belt deflection (4, 5) on the child seat (1), the lower belt deflection (5) being activated when the three-point seat belt (14) is tightened.
- 5. (original) The child seat as claimed in claim 4, characterized in that the lower belt deflection (5) is designed as a clip (13) which is mounted on a lower transverse strut (5).

- 6. (original) The child seat as claimed in claim 4, characterized in that the upper belt deflection is designed as an upper transverse strut (4).
- 7. (currently amended) The child seat as claimed in either of elaims 5 and 6 claim 5, characterized in that the upper transverse strut (4) is connected to the lower transverse strut (5) by two side cheeks (6, 7).
- 8. (currently amended) The child seat as claimed in one of elaims 1 to 7 claim 1, characterized in that the first end of the belt strap (12) is fastened to the clip (13).
- 9. (currently amended) The child seat as claimed in one of claims 1 to 8 claim 1, characterized in that the belt system comprises a harness belt, with a Y-distributor (8) for the harness belt being provided in the back rest (3).
- 10. (original) The child seat as claimed in claim 9, characterized in that the second end of the belt strap (12) is fastened to the Y-distributor (8).
- 11. (original) The child seat as claimed in claim 10, characterized in that the belt strap (12) is guided via deplecting bars (21a, 21b, 21c, 21d, 21e).
- 12. (original) The child seat as claimed in claim 11, characterized in that the belt strap (12) is guided via a tensioning pulley (22) which is held displaceably in a linear guide (23).
- 13. (original) The child seat as claimed in claim 12, characterized in that the tensioning pulley (22) is connected to a latching device of the belt system via a belt strap (27).
- 14. (currently amended) The child seat as claimed in one of claims 1 to 13 claim 1, characterized in that a force-limiting system having means for limiting the maximum belt force is provided.

## PCT/EP2003/010914 Preliminary Amendment dated April 27, 2005

- 15. (original) The child seat as claimed in claim 14, characterized in that the force-limiting threshold of the means for limiting the maximum belt force is dependent on the belt length or belt position set.
- 16. (currently amended) The child seat as claimed in one of claims 1-to 15 claim 1, characterized in that a fastening system is provided with which the child seat is fastened to the supporting structure of the vehicle.
